Reliable paper feed mechanism

Accurate processing of documents with various thicknesses

- The paper feed rollers rotate independently left and right to reduce document skewing during scanning.
- The Active Double-Feed Prevention Roller prevents double-feeding by reversing rotation to separate documents that are stuck together, and then feeds the leading document first.

Document output control

The output speed is automatically lowered for documents that are 5.82 inches or shorter, and the exit guides keep the document from slipping. This stops longer documents from sliding under shorter ones which prevents the output order from changing.

KV-S1065C Specifications

Advanced image processing

Improved scanning quality

- The Automatic Brightness Adjustment function automatically adjusts the brightness and contrast of scanned images, even on documents with varying paper colors and text hues, to produce scanned images with suitable brightness.
- The Automatic Image Emphasis function emphasizes the edges of characters and lines to sharpen them and softens the appearance of other parts of the image. Noise (black spots) is also reduced.

Missing image detection and prevention

When a scanned image is missing due to an inadvertently folded corner (dog-ear) or a document that is extremely skewed, the Dog-Ear Detection function automatically and temporarily stops the scanning. The user can then decide to rescan, or to continue scanning as is.

Dimensions KV-S1065C

As an ENERGY STAR® Partner, Panasonic has determined that this product meets the ENERGY STAR guidelines for energy efficiency.

*1: "Weight in pounds" of paper represents the weight of 500 sheets (17 x 22 in. / 432 x 559 mm).
