

# Now Connected to Everything.

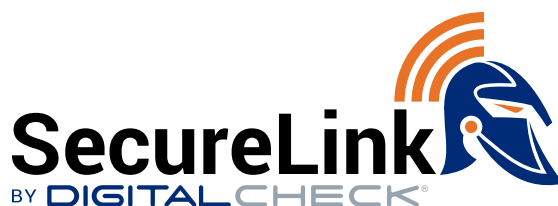

## Your scanner, reimagined™

### INTRODUCING THE SECURELINK NETWORK DEVICE

It's smaller than your smartphone, but it allows your scanner to connect to any other device over either a wired or wireless network. That means you can use a smartphone, a tablet, a laptop, or just about any other network enabled device you can imagine to control your scanner remotely. This 4"x3", hockey puck-shaped box is the first solution in a series of SecureLink products by Digital Check.

SecureLink is our new technology for connecting any Digital Check scanner to another device while still providing our industry-leading image and MICR read quality. The small form factor and style of SecureLink enables many new scanner deployment options, including concierge desks where space is limited and transactions are often mobile device or tablet driven. SecureLink is also perfect for installations where local PC use is minimized and network-based control software and communications are becoming the standard.

The SecureLink external device is backward-compatible with all currently available Digital Check scanners, including the CheXpress® CX30, TellerScan® TS500 and TS240. The external device is available now to select partners for integration testing; production versions are coming in the second half of 2016. Contact your Digital Check account representative for additional information.

**Dimensions:** 4" x 3.4" x 1.1"

**Weight:** 3 oz.

**Compatible Scanners:**

*CX30, TS500, TS240*

**Ports:** USB 2.0 x2, Ethernet

**Connectivity:** 802.11n WiFi adapter
