VeriFone Retail Banking Solutions

VeriFone's easy-to-use MX retail banking solutions can help you instantly identify customers, streamline teller transactions, automate the loan desk, promote additional bank services, and quickly create digital documents with electronic signatures. With the help of VeriFone's MX Solutions, teller service will be enhanced, increasing customer through-put and reducing the need for referrals to bank specialists.

The MX 800 Series are the most secure, reliable, and flexible customer activated solutions available. All MX 800 Series products are designed with durable, proven components like chemically hardened glass screens, rugged magnetic stripe readers, durable keypads, switchless stylus designs and secure solid casings. While the MX 800 Series models provide the flexibility of different options for display size, tactile keypads and function keys, they are all based on an open, industry standard operating system, Linux, which streamlines future product enhancements and are completely interoperable throughout the retail bank.

It all adds up to a handsomely designed, innovative marketing solution that projects a quality brand image to customers right when it matters most. VeriFone's MX Solutions offers the best in class for innovative solutions that address six key retail banking functions on one integrated platform.

Enhanced Security

VeriFone is committed to providing secure solutions that not only protect customer's personal information and your business, but help banks meet card association and local market requirements.

Fast and Accurate Customer Identification

VeriFone solutions offer a better, safer and more accurate way for banks to quickly identify their customers. VeriFone's solutions offer magnetic swipe/PIN entry or optional contactless/smart cards that can be integrated with teller systems and are PCI PED approved.

Electronic Signature Capture

Implementing signature capture helps to reduce paperwork associated with signed documents and easily collect biometric signature data for subsequent analysis.

Automation of Teller Functions

VeriFone offers solutions for a small, inexpensive platform to support unattended or lightly attended self-service kiosk applications.

Cross-Selling of Bank Products

VeriFone solutions provide banks a faster and more profitable way to cross-sell and up-sell to their customers. VeriFone's MX 800 Series provides an interactive way of dynamically promoting your brand and in-store products and services using colorful graphics and full motion video.

First-Rate Customer Experience

VeriFone's retail banking solutions offer new ways to enhance your customer's banking experience with interactive customer activated terminals, fast transaction throughput, and expanded service offering.

MX Solutions. Unmatched Reliability. Maximum Security. Comp

Delivering high-impact promotions and value-added applications, while quickly and securely identifying customers. The **MX 880** features VeriFone's largest full screen display and most powerful processor in a device with a tactile keypad. It combines true multimedia for dynamic branch service promotions, branding and messaging with a customer interface that withstands the heaviest use.

From electronic signature capture and credit applications to contracts and disclosures and more, the MX880 brings maximum screen space for ultimate usability.

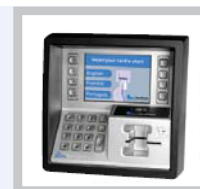

The **MX 870** goes well beyond standard swipe/PIN pad technology and merges multimedia, a full-color display, high quality digital sound and highly secure transaction capabilities into a single, easy-to-use networking device. Banks can harness the communication power of the MX 870 to create brand awareness, reinforce advertising or even deliver cross promotions to their customers.

From today's PIN entry to tomorrow's biometric upgrades, the MX870's field-replaceable modules allow banks to conveniently add functionality and future proof their investment.

A powerful and rugged payment device that can multi-task—from delivering eye-catching promotions to enabling customer touch points such as transaction automation and instant credit applications, the **MX 860** is as versatile as it is performance-oriented.

The combination of a wide screen, tactile keypad and a large signature capture area enhances the customer experience. It features a brilliant full-color display for implementing attention-getting promotions and a variety of other cross-selling applications and customer interaction solutions.

VeriFone's **MX 760** is a durable, all-in-one, unattended payment module designed for the most unforgiving environments. Most wind, rain, and cold won't stop this rugged device, so it's perfectly suited for the outdoors—from bank drive-thrus to outdoor ATMs to kiosks to ticketing and many other self-service payment applications.

The MX760 features an ATM-style keypad for speed of entry, screen-addressable keys for flexible customer input, and a manual-insert hybrid card reader for fast, easy, trouble-free processing even in mixed environments. Its large, high-resolution color display supports rich graphics and animation.

MX Solutions Features & Benefits

Fast and Flexible

- Fast processor and ample memory bring promotions to life with dynamic video
- Tactile keypad reduces errors and speeds processing while helping branches comply with guidelines for the visually impaired
- Backlit ¼ VGA display supports 65,536 vivid colors
- Ethernet connectivity allows content to be downloaded seamlessly and swiftly from any network or centralized server
- Bi-directional magnetic stripe card reader minimizes re-swiping and keeps lanes moving
- MX browser enables customization of value-added applications and extends functionality

Bright and Beautiful

- Large screen area efficiently accommodates optional signature capture, coupled with scrolling receipts, branding and suggestive selling

Rugged and Reliable

- Chemically-hardened screen resists scratching and stands up to high-volume use
- A simple capacitive stylus without electronics or moving parts inside to ensure long life

Integrated and Inspiring

- Modular design gives retail bankers the flexibility to easily expand capabilities at any time to cost effectively meet changing requirements
- Utilizes PAYware Vision, a fully integrated suite of software for payment, signature capture, device management and content delivery, all from a central point of administration

Flexible and Secure

- PCI PED, Interac, EMV, ROHS and WEEE certification
- POS B level PCI PED approval — more secure and more flexible than POS A
- A high level form-based development tool to create common applications designed to work on the entire MX 800 Series products
- An open, industry standard operating system, Linux, not a closed proprietary system
- All support a full line of peripherals including Smart Card Readers, Contactless Readers, Scanners, Printers, Wi-Fi, and Power over Ethernet.
