IJ7100 Series

This compact teller receipt and validation printer is packed with features that make it easy to use and simple to interface. No printer can handle a wide range of bank forms as quickly and easily as the IJ7100. It's also compatible with most of the popular core banking software. The IJ7100 features a high yield Hewlett-Packard print cartridge and is designed to deliver proven reliability with a low cost of ownership.

About Addmaster

Addmaster has been trusted by the banking industry as a leading manufacturer of quality products for over 50 years. The first to bring inkjet technology to bank receipt printing, Addmaster specializes in teller applications and has installed hundreds of thousands of teller printers in leading financial institutions around the world.

Speed and Economy

The IJ7100 delivers fast transactions with economy—something bankers will appreciate. Hewlett-Packard's long-lasting print cartridge is designed with transaction printing in mind, and provides consistent quality that's better than impact or thermal receipts.

Flexible Validation Capabilities

Our full-length validation slot permits a wide variety of form sizes. It's always open and ready to validate so there is no delay. Multi-line validation and a variety of fonts and formats provide great flexibility in validating deposit slips, cash tickets, checks and more.

Enhanced Image Readability

Our patented device aligns the form automatically, so print is consistently in the same location. It's ideal for banks that image documents… read rates can be greatly improved over competitive models.

Bank Teller Receipt & Validation Printer
